/note= "Preferably Ile"

CHER-2/neu (erbB-2) oncogene encodes a receptor-like tyrosine kinase. The extracellular domain of pl85+BR-2 is proteolytically shed from breast carcinoma cells in culture and is found in serium of some cancer patients and may be a serum marker of metastatic breast cancer. An alternative HER cand may be a serum marker of metastatic breast cancer. An alternative HER come and encodes a 79 amino acid extension designated ECDIIIa (the present sequence), which is inserted at residue come in Captorinately 68 kDa) that lacks the transmembrane and circumative mRNA predicts a truncated HER-2. The alternative mRNA predicts a truncated HER-2 compromine (see AAY97240). ps8HER-2 specifically binds to pl85-HER-2 without activating HER-2. It could therefore block dimerization of the site of binds to a site on the ECD of HER-2 that is different from the site of binds to a site on the ECD of HER-2 cancer and binds to the ECD of HER-2). The methods, compositions, polypeptides and antibodies are used to treat solid tumours such as compositions, breast cancer, small cell lung carcinoma, ovarian cancer and/or colon colons. domain of the Using polypeptides and antibodies that bind to the extracellular of the receptor-like tyrosine kinase HER-2 to treat solid tumors breast, lung, ovaries and colon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAGCTGPKHSDCLACLHFNHSGICELHCPALVTYNTDIFESMPNPEGRYTFGASCVTACP 300
                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody. Herceptin, at an affinity of at least 10%. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated pEBHER-2 which lacks the transmembrane and intracellular domains of pl85HER-2 but contains BCD 1, II of the pl85HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus aneagonise nucleic acids encoding these are useful to treat, diagnose and identify solld tumours. The present sequence is human p68HER-2 protein containing ECDIIIa generic sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          181 LTLIDTNRSRACHPCSPCCKGSRCWGESSEDCQSLTRTVCAGGCARCKGPLPTDCCHEQC 240

particularly a polypeptide that binds to the extracellular domain (BCD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10% The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated of BHBRR-2 which lacks the transmembrane and intracellular domains of p188HER-2 but contains BCD I, II of the p188HER-2 and the novel BCDIIIa. The BCDIIIA-Containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p6HBR-2 generic protein containing BCDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p6HBR-2 generic sequence is not shown in the sequence listing (AAB09183)
                                                                                                                                                                                                                                                                                                                                                                                                                         ELIYLPTARSLSFLQDIQBVQGYVLIAHNQVRQVPLQRLRIVRGTQLFEDNYALAVLDNG 120

The invention relates to novel HER-2 (herstatin-2) antagonist
particularly a polypeptide that binds to the extracellular domain (ECD)
of HER-2 at a site that is different from the binding site of humanised
antibody, Herceptin, at an affinity of at least 10.8 The present
invention is based upon the initial discovery of an alternative HER-2
mENA transcript with 274 bp insert of intron 8. The translation product
of the alternative transcript is a truncated HER-2 protein designated
p8HER-2 but contains ECD i, II of the p185HER-2 and the novel ECDIIIa.
The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise
the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the
nucleic acids encoding these are useful to treat, diagnose and identify
solid tumours. The present sequence is human p6HER-2 generic protein
containing ECDIIIa variant sequence. Note: The p6HER-2 generic sequence
shown in the specification but is derived from p6HER-2 generic sequence
(SEQ ID NO:13) shown in the sequence listing (AAE09183)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.

```
The invention relates to a method for treating cancer in a human patient, wherein the cancer expresses epidermal growth factor receptor (BGPR), comprising administering an antibody which binds BrbB2 (HBR2; AAB60408). In particular, the anti-BrbB2 antibody is the murine monoclonal antibody 2C4 (AAB60396, AAB60397) or a humanised version of 2C4 (AAB60398,
                                                                                                Anti-ErbB2 monoclonal antibody 2C4; HER2; mouse; muxine; humanised; VL; light chain variable region; cancer; cytostatic; BGFR-expressing cancer; epidermal growth factor receptor; colon cancer; rectal cancer; tumour; colorectal cancer; tumour; colorectal cancer; non-small cell lung cancer; metastatic breast cancer; affinity purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating cancer in a human, where the cancer expresses epidermal growth factor receptor (EGFR), comprises administering an antibody which binds BrbB2.
                                                                        Human ErbB2 oncoprotein, SEQ ID NO:13
                                                                                                                                                                                                                                                                                                                                                                                              Ξ

WO200100238-A1

CC AAB60399). The invention also encompasses an isolated nucleic acid encoding a humanised ErbB2-binding antibody; vectors and host cells comprising such nucleic acids, the recombinant production of a humanised ErbB2-binding antibody; and an immunoconjugate comprising a humanised ErbB2-binding antibody and a cytotoxic drug. The ErbB2-binding antibodies act by antagonising ErbB receptors, and as inhibitors of transforming crowth factor alpha (TGF-alpha)-activated mitogan activated protein kinase (MAPK). The method of the invention is used for treating cancer, especially colon cancer, rectal cancer, colorectal cancer, lung cancer, cepecially colon cancer, rectal cancer, olorectal cancer, lung cancer, (especially con-small cell lung cancer), or breast cancer (especially mon-small cell lung cancer), or breast cancer (especially cancer) is preferable to the use of EGFR-targetted cugs, as affinity purification agents. Using an antibody which binds to ErbB2 to treat cancer is preferable to the use of EGFR-targetted drugs, as EGFR is also highly expressed in other tissues such as the liver and skin, where the active drug will also bind, with skin toxicity having been observed for EGFR-targetted drugs. Antibodies which bind ErbB2 are anticipated to have better safety profile than such drugs.

The present sequence represents human ErbB2 88888888888888888888

sapiens Homo

The BrbB family of receptor tyrosine kinases are important mediators of cell growth, differentiation and survival. The receptor family includes four distinct members including Epidermal Growth Factor Receptor (EGFR or ErbBl), HERS (ErbB3) and Her4 (ErbB4 or tyro2). The present invention relates to a method for treating prostate cancer. The method comprises administering an antibody which binds ErbB2 and blocks ligand activation of an ErbB receptor. Preferably, the antibody blocks binding of monoclonal antibody 2C4 to ErbB2 and/or blocks the method cativation of mitogen-activated protein kinase (MAPK). The present sequence is the extracellular domain of human ErbB2 Treating prostate cancer in a human comprises administering an antibody which binds $\mbox{\bf BrbB2}$ and blocks ligand activation of an ErbB receptor. Determining an analyte in the presence of an interfering substance, comprises contacting a sample with an antibody recognizing analyte coated surface and interfering substance, and measuring unbound and bound

Example 1; Fig 1; 16pp; English.

The invention discloses a method for determining the amount of an analyte in a fluid sample in the presence of an interfering substance. The method comprises contexting a solid surface, dual-coated with an antibody recognising a free analyte and a second antibody recognising an interfering substance when bound to the analyte, with a fluid sample and then determining the total amount of free analyte and analyte bound to the interfering substance. The example in this specification discloses the quantitative determination of serum HERCEPTIN levels in patients undergoing HERCEPTIN threapy. The method accurately determines the amount of an anti-HER2 antibody is serum or plasma in the presence of an HER2 command (ECD). The labelled secondary antibody recognises the anti-HER2 antibody as well as different from that recognised by the first antibody as well as different from that recognised by the first cartibody as well as different from that recognised by the first cartibody as unit-HER2, that is circulating in a fluid sample (serum or plasma) of ersence of an interfering substance (the ECD) of the HER2 oncogene. The presence of an interfering substance (the ECD) of the HER2 oncogene. The method prevents loss of detection in the quantitative assays and an order prevents in the quantitative assays and an human HER2 recently as HER2 oncogene. The method prevents loss of detection in the gualitative assays and an human HER2 recently in the contract of an interfering substance (the ECD) of the HER2 oncogene. The human HER2 recently in the guantitative assays and an human HER2 recently in the contract of an interfering substance (the SCD) of the HER2 oncogene. The human HER2 recently in the guantitative assays and an human HER2 recently in the guantitative assays and an human HER2 recently in the guantitative assays and an human HER2 recently in the guantitative assays and an human HER2 recently in the sequence of an interfering the guantitative assays and an enterpretation and the guantitative assays and an enterpretation human HER2 receptor extracellular domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ठे
                                                 The invention describes a method of treating cancer that expresses ErbB2 comprising administering to a patient an antibody that binds BrbB2. Specifically claimed are antibodies that bind ErbB2. Particularly monoclonal antibody 2C4 or humanised 2C4, or monoclonal antibody 4D5 or humanised 4D5. The methods are useful for treating cancer in a patient, barticularly a human. The cancer includes carcinoma, lymphoma, blastoma, sarcoma, liposarcoma, mentodocrine tumour, mesothelioma, schwanoma, sarcoma, liposarcoma, methodocrine tumour, mesothelioma, schwanoma, cancer, adenocarcinoma, emeningioma, adenocarcinoma, methodocrine tumour, mesothelioma, schwanoma, squamous cell cancer, epithelial squamous cell cancer, inon-small cell lung, cancer, inog cancer, small coll ung cancer, parcentic cancer, gastric or stomach cancer, gastric or stomach cancer, gastric or stomach cancer, gastric or stomach cancer, color cancer, cancer, bladder cancer, hepatocana, breast cancer, color cancer, colorectal cancer, hepatic cancer, increase anneer, particular cancer, hepatic cancer, increase anneer, colorectal cancer, hepatic cancer, procestate cancer, hepatic cancer, thyroid cancer, hepatic cancer, and cancer, penile cancer, hepatic cancer, actinoma, penile cancer, thyroid cancer, hepatic cancer, a tumour of the biliary cancer, or head and neck cancer. This is the amino acid sequence of human cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121 DPLANTTPVTGASPGGLRELQLRSLTEILKGGVLIQRNPQLCYQDTILHKDIFHKANQLA 180

Extracellular HER-2/neu protein.

```
The present sequence is the extracellular HBR-2/neu protein. HBR-2/neu is an emember of the tyrosine kinase family of receptor-like glycoproteins and shows homology to the epidermal growth factor receptor (BGRN). It probably plays a part in cell growth and/or differentiation. The HBR-2/neu gene is an oncogene. An HBR-2/neu fusion protein comprising a HBR-2/neu extracellular domain fused to a HBR-2/neu phosphorylation domain may be used to treat or prevent cancer by eliciting or enhancing an immune response to the HBR-2/neu protein. It may be used to treat malignancies such as breast, ovarian, colon, lung and prostate cancers, and may be used as an antigen to vaccinate against these neoplasiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ELTYLPTNASISFLØDIQBVQGYVLJAHNOVRQVPLQRLRIVRGTQLFEDNYALAVLDNG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300

The present sequence is that of the extracellular domain of human Her-

2/neu (p185 glycoprotein or c-exb82), an oncogenic self-protein and

2/neu (p185 glycoprotein or c-exb82), an oncogenic self-protein and

2 rarget for anti-cancer vacciones. The Her-2/neu gene is amplified and p185

2 colon, lung and prostate cancer. Her-2/neu (see AAM51143) is a member of

2 the tyrosine kinase family of receptor-like glycoproteins. It comprises

2 nextracellular domain with homology to the epidermal growth factor

2 receptor (EGFR), a highly hydrophobic transmembrane domain and a C-

2 terminal intracellular domain that also shows homology to EGFR. Its

2 cancers. The invention provides Her-2/neu fusion proteins, nucleic acids

2 cancers. The invention provides Her-2/neu fusion proteins, the

2 cancers of molecules. In preferred fusion proteins, the

3 cancers of molecules. In preferred fusion proteins, the

3 cancers of molecules. In preferred fusion proteins, the

3 cancers of molecules. In preferred fusion proteins, or by

3 cancers of the fusion protein is elicited or enhanced by

4 administering the fusion protein is elicited or enhanced by

4 administering the fusion protein in the form of a vaccine, or by

4 administering the fusion protein in the form of a vaccine, or by

5 colon, lung or prostate cancer in a patient. Teells are useful

5 colon, lung or prostate cancer in a patient.

5 cacc with a Her-2/neu fusion protein can be used to remove tumour cells

5 crack with a Her-2/neu fusion protein can be used to remove tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Her-2/neu fusion protein for treating or preventing cancer by eliciting or enhancing an immune response to the protein, has Her-2/neu extracellular domain fused to Her-2/neu intracellular or phosphorylation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 653;

receptor-like glycoproteins and shows homology to the epidermal growth factor receptor (BGRR). It probably plays a part in cell growth and/or differentiation. The HBR-2/neu gene is an oncogene. HBR-7/neu fusion proteins may be used to treat or prevent cancer by eliciting or enhancing an immune response to the HBR-2/neu protein. They may be used to treat malignancies such as breast, ovarian, colon, lung and prostate cancers, and may be used as an antigen to vaccinate against these neoplassias
                                                                                                                                                                                                                                                                120

The present sequence is that of a fusion protein between the extracellular domain and a fragment (DeltaPD) of the phosphorylation domain of human Her-2/neu (see AAM5143), an oncogenic self-protein and target for anti-cancer vaccines. The fusion protein can be obtained by recombinant DNA methods. Her-2/neu overexpression correlates with a poor prognosis in breast and ovarian cancers. The invention provides Her-2/neu comprising the fusion proteins, nucleic acids encoding them, viral vectors, and vaccines comprising the fusion proteins or nucleic acid molecules. In preferred this in proteins, the extracellular domain of Her-2/neu is fused to a Her-2/neu intracellular domain or phosphorylation domain (or its DeltaPD fragment). An immune response to Her-2/neu protein is elicited or enhanced by administering the fusion protein in the form of a vaccine, or the fusion protein, and delivering the transfected cells to the animal. The fusion protein, and delivering the transfected cells to the animal. The fusion protein, under acids, and isolated specific T-cells are consering. Constitute acids, and isolated specific T-cells are consering. Colon, lung or prostate cancer in a patient. The cells that specifically react with a Her-2/neu fusion protein and her-2/neu fusion protein can be used to remove themore.

The present sequence is a fusion protein comprising the extracellular domain and the phosphorylation domain of the human HER-2/neu protein. HER 12/neu is a member of the tyrosine kinase family of receptor-like glycoproteins and shows homology to the epidermal growth factor receptor (EGFR). It probably plays a part in cell growth and/or differentiation. The HER-2/neu gene is an oncogene. HER-2/neu fusion proteins may be used to treat or prevent cancer by eliciting or enhancing an immune response to the HER-2/neu protein. They may be used to treat malignancies such as breast, ovarian, colon, lung and prostate cancers, and may be used as an antigen to vaccinate against these neoplasias
                                                                                                                                                                                                                                                                                                                                  HER-2/neu extracellular domain/phosphorylation domain fusion proteins useful for vaccinating against breast, ovarian, colon, lung and prostate

It is the expression product of a nucleic acid molecule (AAT72725) prepd. by PCR emplification of Her2 CDNA from a breast cancer cell line and fusion to GM-CSF CDNA. Fusion expression vectors can be used to transfect mammalian and insect cells. The Her2-GM-CSF fusion protein is used to generate antiacter immunity. Tumour cells are eliminated by cytocoxic Tlymphocytes exposed to the fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 ELTYLPTNASLSFLQDIQEVQGYVLIAHNQVRQVPLQRLRIVRGTQLFEDNYALAVLDNG 120

GENERAL INFORMATION:
SEQUENCE OF INVENTION:
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/new PROTEIN
TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE TITLE OF INVENTION: HER-2/new ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 69
CORRESPONDENCE ADDRESS:
ADDRESSED: Seed and Berry LLP
STREET: 6300 Columbia Center, 701 Fifth Avenue
CITY: Seatile
STREET: Asshington
COUNTRY: US
                                                                                                                                                                                                                                                                                                     61 BLIYLPTNASLSFLODIQEVOGYVLIAHNOVROVPLORLRIVRGTOLFEDNYALAVLDNG 120

Sequence 68, Application US/08486348A
Patent No. 5846538
GENERAL INFORMATION:
APPLICANT: Cheever, Martin A.
APPLICANT: Disis, Mary L.
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/new PROTEIN
TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE
TITLE OF INVENTION: HER-2/new ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 69
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 ELTYLPTNASLSFLODIQEVQGYVLIAHNQVRQVPLQRLRIVRGTQLFEDNYALAVLDNG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                         Sequence 68, Application US/08466680B

Sequence 68, Application US/08466680B

Patent No. 6075122

GENERAL INFORMATION:
APPLICANT: Cheever, Martin A.
APPLICANT: Disis, Mary L.
TITLE OF INVENTION: INFORMER REACTIVITY TO HER-2/neu PROTEIN
TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE
TITLE OF INVENTION: HER-2/neu ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 69
CORRESPONDER ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 ELIYLPINASLSFLQDIQEVQGYVLIAHNQVRQVPLQRLRIVRGTQLFEDNYALAVLDNG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DPLNNTTPVTGASPGGLREIQLRSIJEILKGCVIJQRNPQLCYQDTILWKDIFHGNQLA 180

Patent No. 6393743

GENERAL INFORMATION:
APPLICANT: Department of Veterans Affairs
APPLICANT: Department of Section and characterization of epidermal growth
TITLE OF INVENTION: 1801ation and characterization of epidermal growth
TITLE OF INVENTION: 1801ation and characterization of epidermal growth
TITLE OF INVENTION: 1801ation and characterization of epidermal growth
TITLE OF INVENTION: 1801ation 05.12
FILE REFERENCE: 107999.00106
CURRENT FILING DATE: 2000-05-12
PRIOR APPLICATION NUMBER: 60/134,200
PRIOR FILING DATE: 1999-05-14
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gape
